Summary

Unreal Engine 5 and Roblox Game Developer with hands-on experience developing modular gameplay systems, combat mechanics, character systems, and real-time game features. Experienced in C++, Blueprints, Roblox development, Unreal Engine source builds, RTX technologies, and version control workflows. Passionate about building scalable gameplay systems and contributing to real-time interactive experiences.

Technical Skills

- **Game Development:** Unreal Engine 5 (Blueprints), Gameplay Systems, Component-Based Architecture, Roblox Game Development
- **Character Systems:** Combat Mechanics, Player Stats Systems, Motion Matching
- **Rendering & Performance:** NVIDIA DLSS, DLSS Ray Reconstruction, Frame Generation, NIS
- **Version Control:** Perforce, Diversion
- **Programming Knowledge:** C++, C, Python, Luau
- **Tools:** Blender, Unreal Engine, nvRTX branch of UE5, Roblox

Projects

Simulation 0 — Sci-Fi Action Game (Unreal Engine 5) **Demo Videos:** Sudip's Portfolio

Personal Project | Blueprint-Focused Development Visual Gameplay Demo showcasing RTX features and performance optimization

- Developed a sci-fi action game set in a simulated world using Unreal Engine 5 Blueprints.
- Built the project on the NVIDIA RTX branch of Unreal Engine 5.7.
- Designed a fully component-based combat system including sword, rifle, punch, shield montages, and dodge mechanics.
- Implemented a modular Player State system using Blueprint components, decoupled from the Character Blueprint.
- Integrated NVIDIA DLSS, DLSS Ray Reconstruction, Frame Generation, and NIS sharpening.
- Implemented motion matching for responsive character locomotion.
- Created a basic enemy AI to validate combat mechanics.
- Developed an in-game settings menu.
- Implemented Unreal Engine's Gameplay Ability System (GAS) using C++.
- Used Perforce for version control.

Experience

Unada Labs – Unreal Developer Intern **12th August 2026 – 13th August 2026**

- Developed a **C++-based HUD Compass system** in Unreal Engine.
- Implemented compass orientation using the **Player Controller's control rotation (Yaw)**.
- Used **Unreal Engine Materials** to dynamically represent directional movement on the compass.

Arise Media – Game Developer **17th August 2026 – 14th September 2026**

- Developing gameplay features and systems for **Roblox** projects.
- Implemented **camera FOV transitions** triggered by character sprinting and stopping.

- Developed a **damage number popup UI** to provide visual feedback when the player hits an enemy.
- Implemented **directional camera sway** synchronized with the player's punch direction.
- Contributed to **character movement polishing** to improve responsiveness and overall gameplay feel.
- Designed and refined the **Badge UI** for the project.

Education

Ramkrishna Mahato Government Engineering College, Purulia 2022 – 2026
Bachelor of Technology — Electronics and Communication Engineering

Class XII
WBCHSE --- Ramjibanpur Babulal Institution 2021

Class X
WBBSE --- Ramjibanpur Babulal Institution 2019
